

# **TITLE 326 AIR POLLUTION CONTROL DIVISION**

## **Rule Information Sheet**

Alcoa Best Available Retrofit Technology Correction  
LSA Document #13-503

### **Overview**

This rulemaking amends 326 IAC 26-2-2 concerning a correction to the Best Available Retrofit Technology (BART) requirements for Alcoa Power Generating Inc. (APGI), Warrick Power Station. This facility, located in Newburgh, Indiana, is a generating facility located along the Ohio River just east of Evansville that provides power to Alcoa Warrick Operations. The company requested a revision to the averaging period for the nitrogen oxide (NO<sub>x</sub>) emission limit for two units to correct a mistake and for consistency with the other units at the facility. The BART analysis provides for a NO<sub>x</sub> emission limit independent of the averaging period. The 24-hour rolling average currently in the rule is an error carried over from the BART analysis to the rule language and is causing a hardship to Warrick Power Plant in complying with the rule. IDEM is proposing to correct the language, as well as minor administrative corrections.

### **Affected Persons**

This rulemaking affects Alcoa Power Generating Inc. (APGI), Warrick Power Station.

### **Reasons for the Rule**

The purpose of this rulemaking is to make a correction in the existing rule language.

### **Economic Impact of the Rule**

There is no economic impact from this rulemaking because it is a technical amendment with no substantive effect on existing Indiana rules.

### **Scheduled Hearings**

Public Hearing: March 12, 2014, 1:30 p.m. at the Indiana Government Center-South, 302 West Washington Street, Conference Center Room A, Indianapolis, Indiana.
